

SAGE NOTES

Spectrum 5.1 Update

These instructions will take you through the process of downloading the Spectrum 5.1 update file from our web site. You must have Spectrum 5.0 installed before running the Spectrum 5.1 update.

Note: This update is a client update for the Spectrum Circ/Cat and/or Patrons' Catalog workstations. This client update is optional. You can choose to update selected workstations to version 5.1 and leave other workstations running version 5.0.

Below are some of the issues addressed by this update:

- Reports can be saved in both .htm and tab-delimited format for easy use in a variety of other programs
- Additional index choices for Materials Overdue reports
- Adjustable font sizes for Material and Patron barcode printing
- Easy Entry template now saves type of record (position 6 leader) as 'a' – Printed Language Material
- Series Title (440 tag) searching on a phrase now returns all results
- First line of Material and Patron barcodes now print bold font for better visibility
- Report totals corrected for Patrons with Usage and Materials with Usage reports
- Inventory Reports for Lost and Not Lost can now be indexed by Material Type
- Marking a material lost in circulation now stores the current date lost
- Increased font size for mailing labels
- Searching from the catalog now ignores punctuation, including quotations around a title, which could have prevented finding a material in the past

To update to Version 5.1 of Spectrum, download the 5.1 Update from the following website:

<http://www.sagebrushcorp.com/support/spec51update.cfm>

Available for download are the Release Notes explaining all the changes and new features available with the update, the installation instructions, and the file updates specific to your OS and program type. Please download and follow these instructions to install the update on your system.
